

architectural panels, by lumicor

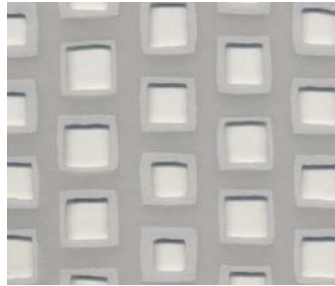

DESIGN
Tex

Interior spaces can be enhanced with light, color and texture
when Lumicor® is used to
create unique architectural elements.

architectural panels, by lumicor

Architectural panels can be molded and formed into any custom application. They make a statement when used for displays, furniture or architectural structures. The design of the material itself can be chosen from a standard Lumicor offering or can be a completely custom design using Designtex textiles, metallics, embosses, botanicals and woodworks as core elements.

- | applications | features |
|---------------------|---------------------------------|
| furniture | exceptional depth and clarity |
| lighting fixtures | outstanding UV properties |
| partitions | easy to fabricate and install |
| column wraps | low maintenance |
| workstations | renewable surface |
