O T T O S C R E E N S

The Otto screen offers numerous options to divide interior space and reduce large commercial environments to a personal scale with translucent sculptural monolithic elements. From the front view the screens create a clean, well proportioned form revealing the interior construction through the fabric covering. From the side view the subtle curved interior adds volume to the profile. The Xorel cover has unique characteristics that enhance the appearance of the Otto screen. It can not be punctured and is easily cleaned. Fifteen standard Xorel fabric choices are offered.

Multiple base options increase the flexibility of this product. The arc steel stationary base is both visually striking and functional. Its narrow footprint is stable and stays upright after being bumped by passers by. The Otto screen with a wheel base can be used as a repositionable space divider or mobile marker board. This mobility allows for use in multi purpose areas.
