### Mobile Charting Stations

The Softcare mobile cart family consists of a Phlebotomy Cart, Mobile Charting Table and a Secure Mobile Laptop Cart. All have a sit to stand adjustability. The unique styling and patented lift technology make the carts the solution for many applications.

#### Phlebotomy Cart

The adjustable Phlebotomy Cart allows phlebotomists to carry more supplies and keeps everything within reach during the draw. Oversized castered legs and a handle make the cart very easy to maneuver; the off-set length of the rear legs make it easy to walk with the cart and save space when it is being stored. The durable ABS work surface has molded compartments with a "lip" that prevents tubes from rolling off.

#### Secure Mobile Laptop Cart

The Secure Mobile Laptop Cart is a height adjustable cart that delivers point of care technology, improving workflow and increasing accuracy. This special work surface provides security to the laptop. The patented lift technology offers an unsurpassed 18" of ergonomic height adjustment range, rugged construction, and space saving accessibility. Perfect in any environment: patient, emergency & operating rooms, labs radiology, nurses' stations.

#### Mobile Charting Table

The Mobile Charting Table is a table that has flexibility. This table comes with a standard rigid Thermofoil surface with a soft, tapered edge. With 18" of ergonomic height it will allow you to work in either a sit or stand position. This go anywhere table will allow you to stay mobile throughout a facility and give you an area to write and work on while in patient care rooms.
